

IARPA Challenge : Information Aggregation Competition by US Intelligence Agency

Contact : naman.goel@epfl.ch, diego.antognini@epfl.ch,
boi.faltings@epfl.ch

IARPA is organizing a competition with a prize money of 200,000 USD. You will be provided data containing predictions about future events by a crowd of human forecasters. The problem is to aggregate these predictions into a probabilistic prediction about the event. You will be scored based on the accuracy of your aggregated prediction once the events realize. The challenge will run for a period of a few months and you will have multiple opportunities to improve the algorithm and score.

More details are available here :
